

# ENGINEERING

CIVIL + COASTAL

Our firm is at the forefront of engineering solutions that safeguard and enhance our communities' interaction with their natural surroundings. We specialize in the planning, design, and management of projects relating to flood protection, municipal infrastructure, coastal restoration, marine construction, oil and gas, and land development. Our methodology combines historical insights, industry leading sonar and geotechnical technology and capabilities, and forward-looking objectives to ensure our projects are both impactful and sustainable.

Our expertise in creating clear and comprehensive construction bid documents is a testament to our meticulous planning and specification preparation, which guarantees successful project realization. We stay abreast of the latest standards and techniques to propose solutions that optimize efficiency and enhance project outcomes both during construction and in their long-term operation.

## SERVICES

- General Engineering
- Hydraulics & Hydrology Engineering
- Structural Engineering
- Coastal Engineering
- Dredge Engineering
- Construction Administration
